

Center for Vaccine  
Ethics and Policy

**Vaccines and Global Health: The Week in Review**  
**10 June 2023 :: Issue 706**  
**Center for Vaccine Ethics & Policy (CVEP)**

*This weekly digest targets news, events, announcements, articles and research in the vaccine and global health ethics and policy space and is aggregated from key governmental, NGO, international organization and industry sources, key peer-reviewed journals, and other media channels. This summary proceeds from the broad base of themes and issues monitored by the Center for Vaccine Ethics & Policy in its work: it is not intended to be exhaustive in its coverage.*

*Vaccines and Global Health: The Week in Review is published as a PDF and scheduled for release each Saturday [U.S.] at midnight [0000 GMT-5]. The PDF is posted at <https://centerforvaccineethicsandpolicy.net>. This blog allows full text searching of over 27,000 entries.*

**UNICEF**

**Escalating needs of children drive UNICEF's biggest-ever procurement of life-saving supplies**

COPENHAGEN, 7 June 2023 – Responding to the growing needs of children worldwide, **UNICEF marked a sixth consecutive year of record-breaking procurement in 2022. This included the delivery of 3.4 billion vaccine doses**, 2.1 billion water purification tablets, 38.1 million long-lasting insecticidal nets, 162,000 education kits, and enough ready-to-use therapeutic food (RUTF) to treat around 5.1 million children suffering from severe wasting.

The total value of UNICEF-procured supplies and services reached a **record US\$7.383 billion – a 93 per cent increase compared to pre-pandemic levels** – fuelled in part by the growing needs of children and families living through new and ongoing humanitarian emergencies including in Afghanistan, Pakistan, Ukraine, Yemen, the Horn of Africa and the Sahel.

“UNICEF’s procurement level in 2022 underscores a global confluence of crises, with more children in need of humanitarian assistance than at any other time since the Second World War,” said Etleva Kadilli, Director of UNICEF’s global supply and logistics operations. “Working in collaboration with governments, partners and donors, UNICEF took urgent action to reach vulnerable children and their families with essential supplies, while also working to strengthen the systems that children depend on, such as health care, water, sanitation and education.”

According to the UNICEF [Supply Annual Report](#) released today, the organization transported over 244,000 metric tons of supplies to 162 countries and areas – a weight equivalent to that of 1,200 Boeing 747 aircraft – including the delivery of emergency supplies to 140 countries and areas. In

addition, UNICEF delivered 2.4 billion routine vaccine doses to reach 45 per cent of the world's children under 5 years of age, alongside 977.9 million doses for COVID-19 vaccination campaigns.

Also highlighted in the report is a 90 per cent increase in the procurement of nutrition supplies between 2021 and 2022 in response to the growing global nutrition crises and increased demand for RUTF. Large-scale deliveries took place to the Horn of Africa, where five successive failed rainy seasons in the past three years have left over 1.9 million children at risk of dying from severe malnutrition.

**In a major development in child health last year, UNICEF awarded a contract for the first-ever supply of a malaria vaccine.** The breakthrough follows successful pilot programmes in Ghana, Kenya and Malawi, and the World Health Organization's (WHO) recommendation for widespread use in countries with moderate to high malaria transmission. UNICEF is working with partners to ensure a healthy malaria vaccine market, forecast demand, and procure and deliver the vaccine, which will help to protect against one of the leading causes of death for children under 5 years of age.

**Critical to UNICEF's emergency response efforts is its network of global supply hubs in Copenhagen, Brindisi, Dubai, Guangzhou and Panama City,** which stock supplies that are ready to be delivered as quickly as possible to reach children and families. Strategically located around the world, these hubs packed and delivered 409,000 kits including medicines, school items, and sanitation and hygiene supplies to support children's healthcare, education and protection...

## **World Organisation for Animal Health (WOAH)**

### **WOAH's Animal Health Forum reshapes avian influenza prevention and control strategies**

Published on 07/06/2023

*In light of the ongoing global avian influenza crisis, the World Organisation for Animal Health (WOAH) hosted its first Animal Health Forum, fully dedicated to the disease. The Forum served as a platform for international experts, private sector and government representatives to engage in meaningful discussions about the current challenges and perspectives for combatting avian influenza.*

Since 2005, the toll of avian influenza has been staggering, with over 500 million birds lost to the disease. Its devastating impact extends beyond domestic and wild birds, threatening livelihoods and food security alike. The recent paradigm change in the ecology and epidemiology of avian influenza has heightened global concern as the disease has spread to new geographical regions, has caused unusual wild bird die-offs, and has led to an alarming rise in mammalian cases. The rapidly evolving nature and the changes in spread patterns have encouraged leaders and experts to review existing avian influenza prevention and control tools, including the use of vaccines.

The Animal Health Forum held during WOAH's recent 90th General Session convened key stakeholders and the full membership of the Organisation to discuss how to minimise the impacts of avian influenza across sectors. Based on the Technical Item—'Strategic Challenges in the Global Control of High Pathogenicity Avian Influenza' presented at the event, participants discussed the impact of the disease, the fitness for purpose of existing prevention and control tools, international trade impact, and the necessity to enhance global coordination. Following the Forum, WOAH issued a comprehensive report capturing the discussions and outcomes.

**Vaccination emerged as a critical point of discussion. Countries that previously relied on conventional methods to control avian influenza are now facing overwhelming challenges that have prompted them to explore additional measures.** Alongside biosecurity, movement control and stamping out, WOA's General Assembly debated the use of vaccination as a complementary tool and extensively discussed its associated implementation challenges. It was recognised that a successful vaccination strategy must rely on authorised vaccines that closely match the virus strains in circulation. Furthermore, it must be accompanied by robust disease surveillance, which is able to demonstrate freedom from infection in the domestic animal population as recommended by WOA's Terrestrial Animal Health Code. By considering all existing science-based control measures and using them in line with international recommendations, countries can develop their own national strategies tailored to their local context and ensure their effectiveness.

**WOAH Members adopted a Resolution which will serve as a basis for shaping future avian influenza control activities, while protecting wildlife,** supporting the poultry industry and the continuity of trade. The Resolution notably underscores the importance of Members respecting and implementing WOA's international standards to effectively combat avian influenza. Recognising the compliant use of vaccination without negative consequences on trade as per WOA's standards further stresses the need for robust vaccination monitoring and disease surveillance systems...

## **AMR**

### **The Quadripartite announces the rebranding of the global annual awareness campaign on antimicrobial resistance**

Published on 01/06/2023

*World Antimicrobial Awareness Week (WAAW) will now be World AMR Awareness Week.*

Antimicrobial resistance (AMR) represents a major global threat across human, animal, plant, food, and environmental sectors. In 2019, it was estimated that almost 5 million deaths were associated with bacterial AMR, including 1.27 million deaths being directly caused by it. Addressing AMR requires a holistic and multi-sectoral approach referred to as a One Health approach.

In 2015, countries adopted a Global Action Plan on AMR. Its first objective is improving awareness and understanding of AMR through effective communication, education, and training. Organizing a global annual awareness campaign was identified as an activity to contribute to this objective. Thus, an annual campaign was established to raise global awareness and understanding on AMR, while serving as an important example of One Health collaboration. This campaign was known as World Antimicrobial Awareness Week (WAAW).

**Today, the Quadripartite organizations – the Food and Agriculture Organization of the United Nations (FAO), the United Nations Environment Programme (UNEP), the World Health Organization (WHO), and the World Organisation for Animal Health (WOAH) – are pleased to announce the rebranding of WAAW as World AMR Awareness Week...**

## **PHEIC**

### **Polio**

#### **Polio this week as of 07 June 2023 - GPEI**

##### *Headlines*

:: Across the African Region, efforts continue to be intensified to tackle outbreaks of polio in different areas. Last week, Africa's largest polio vaccination drive since 2020 was launched, aiming to reach more than 21 million children. At the same time, the Democratic Republic of Congo launched a campaign using the novel oral polio vaccine type 2 (nOPV2), while efforts to access to high-quality laboratory data for polio eradication continue to be stepped up.

##### *Summary of new polioviruses this week:*

- Afghanistan: one WPV1 case and five WPV1 positive environmental samples
- Pakistan: two WPV1 positive environmental samples
- Chad: two cVDPV2 cases
- DRC: five cVDPV2 cases
- Zambia: one cVDPV2 positive environmental sample

## **Coronavirus [COVID-19]**

<https://www.who.int/emergencies/diseases/novel-coronavirus-2019>

### ***WHO Weekly Epidemiological and Operational updates***

*Last update: 24 May 2023*

**Confirmed cases ::** 767 750 853

**Confirmed deaths ::** 6 941 095

**Vaccine doses administered:** 13 396 086 098

#### **Weekly epidemiological update on COVID-19 - 8 June 2023**

##### *Overview*

Globally, over 1.7 million new cases and over 10 000 deaths were reported in the last 28 days (8 May to 4 June 2023), a decrease of 38% and 47%, respectively, compared to the previous 28 days (10 April to 7 May 2023). During this 28-day reporting period, 144 of 243 (59%) countries and territories reported at least one case. The situation at the regional level shows decreases in cases and deaths in all six WHO regions. As of 4 June 2023, over 767 million confirmed cases and over 6.9 million deaths have been reported globally.

.....  
.....

### ***Our World in Data***

**Coronavirus (COVID-19) Vaccinations** [Accessed 10 Jun 2023]

:: 70.1% of the world population has received at least one dose of a COVID-19 vaccine.

:: 13.42 billion doses have been administered globally, and 298,483 are now administered each day.

:: 30.2% of people in low-income countries have received at least one dose.

Last update: 18 hours ago.

## **UN OCHA – Current Emergencies**

*Current Corporate Emergencies*

### **Afghanistan**

*Editor's Note:*

*We observe that OCHA has removed Afghanistan from its listing of "Current Emergencies." We did not identify any explanation for its removal.*

### **Northern Ethiopia**

**Ethiopia - Situation Report, 29 May 2023**

### **Somalia**

*No new digest content identified.*

### **Türkiye/Syria Earthquakes**

*No new digest content identified.*

### **Ukraine**

*Highlights* Last Updated: 26 May 2023

- The war in Ukraine has further escalated in 2023, with hostilities ravaging communities in the east and south and taking a heavy toll on civilians living close to the front line.
- Mine contamination is also creating tremendous challenges for civilians trying, for example, to get back to their farms, and humanitarians striving to deliver assistance.
- Despite tremendous challenges, humanitarian organizations in Ukraine continue to reach more people every month. By the end of April, 5.4 million had received aid.
- This was possible thanks to the efforts of hundreds of aid organizations, local groups and volunteers who play a vital role in getting assistance for those who need it the most.
- Insecurity and access challenges continued, however, to hamper assistance in areas under Russian military control. Funding also remained low, adding to the challenges.

### **WHO and the Global Fund announce commitment for enhanced collaboration**

Today the World Health Organization (WHO) and the Global Fund to Fight AIDS, Tuberculosis and Malaria (the Global Fund) signed a new and revised Strategic Framework for Collaboration, designed to build stronger and more resilient health systems and maximize collaboration and impact in support of country, regional and global responses to major communicable diseases.

The new five-year framework builds on the previous agreement signed in 2018. It aligns with the 2023-2028 Global Fund Strategy and the WHO General Programme of Work, which put communities at the centre of the health response and also address pandemic preparedness and challenges posed by climate change. The framework fits with broader collaboration platforms to accelerate support to countries to achieve the health-related Sustainable Development Goals (SDGs) including Universal Health Coverage (UHC)...

#### **[June 6, 2023 - FDA Announces Additional Steps to Modernize Clinical Trials](#)**

Today, the U.S. Food and Drug Administration is announcing the availability of a draft guidance with updated recommendations for good clinical practices (GCPs) aimed at modernizing the design and conduct of clinical trials, making them more agile without compromising data integrity or participant protections. The updates are intended to help pave the way for more efficient clinical trials to facilitate the development of medical products. The draft guidance is adopted from the International Council for Harmonisation's (ICH) recently updated E6(R3) draft guideline that was developed to enable the incorporation of rapidly developing technological and methodological innovations into the clinical trial enterprise.

"A more robust clinical trial ecosystem that is capable of producing reliable evidence more efficiently may support more informed decision-making in developing medical products to help patients," said FDA Commissioner Robert M. Califf, M.D. "These draft recommendations propose a major step forward in this work. Building quality into the design and conduct of trials and encouraging the use of innovative trial designs and health technologies are essential to truly advance clinical trials and generate meaningful results."...

### **Real-World Data and Real-World Evidence in Regulatory Decision Making**

CIOMS Working Group XIII

Submissions deadline 14th of July 2023.

Draft: CIOMS WG XIII 6June2023 Draft report for comment

Background

There is increasing interest in the use of Real-World data (RWD) to support regulatory decision making across the product life cycle. Key sources of RWD are electronic health records, claims data, prescription data, and patient registries. Real-world evidence (RWE) is the clinical evidence about the usage and potential benefits or risks of a medical product derived from an analysis of RWD. For decades, such evidence has been well accepted for satisfying post-approval safety monitoring requirements but has not been used commonly to demonstrate drug effectiveness, which is a relatively new concept.

As applications are increasing, it is proposed that CIOMS develop a consensus report and recommendations for the use of RWD and RWE in regulatory decision-making related to biopharmaceutical products. This report will cover three key areas:

:: Articulate the different RWD/RWE requirements depending on the intent of use e.g. Regulatory, Payers, and Public Health;

:: Propose harmonized practices and guidance for using RWD and RWE for regulatory purposes (given that there are no existing consensus guidelines);

:: Articulate point of view (POV) on key ethical issues relevant to RWD and RWE and a provisional set of standards to address those issues (the high-level POV may lead to a separate/satellite group of ethicists to deal with it). Full Concept Note (31 March 2020)

Monday, 5 June 2023

As European health systems recover from a once in a life-time pandemic, these health systems are now coming under new pressure in this post-pandemic transition period to address the backlog of disrupted health services. This presents increased patient and health professional safety risks as ‘burnt out’ staff and under resourced health systems try to deliver services to the quality and safety standards mandated by their national and European Union legal, policy, practice protocols, and standards frameworks. Any strategies to alleviate this increased service use pressure would improve patient access and patient/health worker safety enormously...

GAITHERSBURG, Md., June 5, 2023 /PRNewswire/ -- Novavax, Inc. (Nasdaq: NVAX), a global company advancing protein-based vaccines with its novel Matrix-M™ adjuvant, has signed a three-year agreement with the Bill & Melinda Gates Medical Research Institute to provide its adjuvant for use in preclinical vaccine research.

"We are excited to partner with the Bill & Melinda Gates Medical Research Institute to include our unique technology in their public health-focused vaccine research efforts," said John C. Jacobs, President and Chief Executive Officer, Novavax. "Our Matrix-M™ adjuvant is proven to enhance and broaden the immune system response when included in vaccines and is already a key component of COVID and malaria vaccines on the market today. We look forward to partnering more broadly with a variety of organizations so that our technology can benefit vaccine development across many disease areas."

"The Bill & Melinda Gates Medical Research Institute is committed to developing biomedical interventions that address global health concerns for those in the greatest need," said Emilio Emini, PhD, chief executive officer of the Bill & Melinda Gates Medical Research Institute. "We look forward to working with Novavax's Matrix-M™ adjuvant in some of our early-stage vaccine programs."...

### ***Journal Watch***

*Vaccines and Global Health: The Week in Review* continues its weekly scanning of key peer-reviewed journals to identify and cite articles, commentary and editorials, books reviews and other content supporting our focus on vaccine ethics and policy. Journal Watch is not intended to be exhaustive, but indicative of themes and issues the Center is actively tracking. We selectively provide full text of some editorial and comment articles that are specifically relevant to our work. Successful access to some of the links provided may require subscription or other access arrangement unique to the publisher.

If you would like to suggest other journal titles to include in this service, please contact David Curry at: [david.r.curry@centerforvaccineethicsandpolicy.org](mailto:david.r.curry@centerforvaccineethicsandpolicy.org)

### ***Patient-Centered Transgender Surgical Care***

The November 2016 issue of the journal, *Transgender Health*, focused on the importance of expanding gender-affirming health care services, enhancing the quality of transgender patients' clinical encounters, and improving general medical and mental health outcomes among gender diverse patients. This current issue follows up on that initial inquiry, delving specifically into relationships among autonomy protections and patient-centered informed consent and shared decision-making processes in gender-affirming surgical care.

*Abstract*

Global health requires evidence-based approaches to improve health and decrease inequalities. In a roundtable discussion between health practitioners, funders, academics and policy-makers, we recognised key areas for improvement to deliver better-informed, sustainable and equitable global health practices. These focus on considering information-sharing mechanisms and developing evidence-based frameworks that take an adaptive function-based approach, grounded in the ability to perform and respond to prioritised needs. Increasing social engagement as well as sector and participant diversity in whole-of-society decision-making, and collaborating with and optimising on

hyperlocal and global regional entities, will improve prioritisation of global health capabilities. Since the skills required to navigate drivers of pandemics, and the challenges in prioritising, capacity building and response do not sit squarely in the health sector, it is essential to integrate expertise from a broad range of fields to maximise on available knowledge during decision-making and system development. Here, we review the current assessment tools and provide seven discussion points for how improvements to implementation of evidence-based prioritisation can improve global health.

*ABSTRACT*

This paper explores women smallholder livestock farmers' barriers to effective participation in the livestock vaccine value chain (LVVC) and strategies for optimising the use of vaccines against poultry (Newcastle disease), and goat diseases (Peste des Petits Ruminants) in Sembabule District, Uganda. Using the three domains of empowerment theory: intrinsic, instrumental, and collective agency combined with USAID's gender analysis framework, we found that limited control over resources, and inadequate gender responsive policies hinder women's participation. Self-help groups increased opportunity for livestock ownership, autonomy, and decision-making. Engagement of women in the LVVC, is an entry point for improved vaccine accessibility, and agency.

*ABSTRACT*

Translational bioethics expands the scope of research ethics to include multidisciplinary analyses of the societal implications of new translational science discoveries. Novel health privacy issues are raised by the collection, use, and disclosure of extensive and diverse big data for research on precision medicine. Similar privacy concerns surround the use of artificial intelligence to analyze vast troves of clinical records to improve patient outcomes. Embedding bioethics scholars with translational scientists can improve the technical analyses and timeliness of bioethical inquiries, but they complicate the task of producing independent and rigorous ethical assessments.

*Abstract*

*Purpose*

Advances in the study of ultrarare genetic conditions are leading to the development of targeted interventions developed for single or very small numbers of patients. Owing to the experimental but also highly individualized nature of these interventions, they are difficult to classify cleanly as either research or clinical care. Our goal was to understand how parents, institutional review board members, and clinical geneticists familiar with individualized genetic interventions conceptualize these activities and their implications for the relationship between research and clinical care.

### ***Special Section: Global Voices for Global Justice: Expanding Right to Health Frameworks***

...The papers in this special section work together to move toward a global social medicine for the 22nd century. They envision a global social medicine that confronts and moves beyond the traditionally colonial, xenophobic, heteronormative, patriarchal, gender-binary-bound, capitalist, and racist histories of the fields of global health and human rights. They seek to instantiate a global social medicine that centers knowledge and experiences from the Global South and works toward social justice and health equity at scale. In this special section, the authors are particularly interested in understanding, challenging, and expanding our perspectives and enactments of the right to health. Unlike neoliberal perspectives on health that often limit their explanatory capacity to how individuals behave in the world, the papers here move beyond the focus on lifestyles and on the phantasmagoria of a sovereign subject with supposedly free agency. Instead, authors work toward critical consciousness that accounts for structural processes—with their inequities and disruptions, as well as their effects on individuals—and how this consciousness can open new horizons for collective transformation and social emancipation in health...

### **[What's the ideal World Health Organization \(WHO\)?](#)**

Clare Wenham, Sara E. Davies

Published online by Cambridge University Press: 13 April 2023, pp. 329-340

*Abstract*

The World Health Organization (WHO) is tasked with the 'attainment by all peoples of the highest possible level of health', yet, it is widely struggling to meet this mandate, and COVID-19 has revealed

significant limitations of the organisation. Despite clear guidance provided by the institution as to how best to respond to the pathogen, many governments departed from WHO's guidance in their response efforts. Is this a new crisis for WHO? Does WHO need to restore its legitimacy in the eyes of the global community? As renewed calls for changes to WHO emerge, in this perspective we lay out the obstacles WHO face to become the WHO 'we' need. The assumption is that UN member states need an empowered and well-funded organisation. Yet, many years of discussion of reform of WHO have failed to lead to meaningful change, and glaring challenges remain in its financing, governance and politics, which are considered in turn. The reality may be that we have the WHO that UN member states need – one that can provide guidance and advice, but also take criticism for health governance failures when states want to avoid blame or responsibility. We discuss this, by analysing three key areas of WHO'S challenges: mandate and scope; structure, governance and money and domestic vs international.

*The Lancet Commissions*

#### **[Lancet Commission on synergies between universal health coverage, health security, and health promotion](#)**

Irene Agyepong, et al.

Since 2018, this Lancet Commission has sought to understand how to maximise synergies between the global health agendas of universal health coverage, health security, and health promotion, and what drives dis-synergies. By synergies the Commission is referring to an intervention, institutional capacity, or policy, that positively and substantially contributes to the achievement of two or more of these agendas in the areas where they intersect. We gathered data through desk reviews; case studies at the subnational, national, and global levels; consultation with two subregional bodies; and periodic

Commissioner meetings both face to face and online to review, analyse, and synthesise data. Several key findings and implications for action arise from the analysis and the gathered data, particularly the in-depth country case studies, which provided several examples of these issues in action.

**[The shared ethical framework to allocate scarce medical resources: a lesson from COVID-19](#)**

Ezekiel J Emanuel, Govind Persad

*Conclusion*

The COVID-19 pandemic necessitated the allocation of multiple scarce medical resources, and forced clarification on the ethics of such allocation. The lessons learned clarify that the ethical framework to guide allocation entails five substantive values—minimising harms, mitigating disadvantage (ensuring equity), equal moral concern (not identical treatment), reciprocity, and instrumental value. The pandemic also helped to clarify the establishment of priority tiers that primarily emphasise instrumental value, minimising harm, and mitigating disadvantage. Finally, the pandemic showed that implementation requires careful attention to ensure disadvantaged groups are not further disadvantaged. This aim necessitates carefully delineating eligible groups, avoiding seemingly open access methods that prioritise the wealthy with capabilities and skills to access resources, and applying active—not passive—distribution methods, since passivity favours the privileged. Learning these lessons on the ethical allocation of scarce medical resources from COVID-19 should facilitate the rapid distribution of other scarce medical interventions in the next health emergency.

### *Abstract*

This scientific review paper explores international and country-specific healthcare guidelines for non-communicable diseases with the highest burden among individuals aged 75 years and above. The study aims to identify the best vaccination practices and standardize healthcare practices to improve vaccination adherence in this vulnerable population. Given that older people are more prone to infectious illnesses and have higher rates of morbidity and mortality, vaccinations are essential for disease prevention. Despite the proven efficacy of vaccinations, adherence has plateaued in recent years, partly due to a lack of accessibility, public education, and variability in disease-specific guidelines. This paper highlights the need for a more robust and standardized international vaccination model to improve quality of life and reduce disability-adjusted life years among the elderly. The findings of this study call for further research to review the guidelines as more implementations are put in place, including non-English guidelines.

[\*\*Enhanced cholera surveillance as a tool for improving vaccination campaign efficiency\*\*](#)

Hanmeng Xu, Kaiyue Zou, Juan Dent, Kirsten E. Wiens, Espoir Malembaka Bwenge, Lee M. Hampton, Andrew S. Azman, Elizabeth C. Lee

medRxiv 2022.11.25.22282776; doi: <https://doi.org/10.1101/2022.11.25.22282776> Revision

#### *Abstract*

Systematic testing for *Vibrio cholerae* O1 is rare, which means that the world's limited supply of oral cholera vaccines may not be delivered to areas with the highest true cholera burden. We modeled how expanding *V. cholerae* testing affected vaccine impact and cost-effectiveness across different bacteriological confirmation and vaccine targeting assumptions. Systematic testing yielded higher efficiency and cost-effectiveness and slightly fewer averted cases than status quo scenarios targeting suspected cholera. With a 10 per 10,000 incidence rate targeting threshold, testing and status quo scenarios averted 10.3 (95% PI: 8.3-13.0) and 5.6 (95% PI: 4.6-6.7) cases per 1,000 FVPs, respectively. Comparing these scenarios, testing costs increased by \$37 (95% PI: 29-52) while vaccination costs reduced by \$376 (95% PI: 275-556) per averted case. Introduction of systematic testing into cholera surveillance could improve efficiency and reach of global OCV supply for preventive vaccination.

**[REVISED - First dose COVID-19 vaccine coverage amongst adolescents and children in England: an analysis of 3.21 million patients' primary care records in situ using OpenSAFELY](#)** [version 2; peer review: 1 approved, 1 approved with reservations]

Lisa E. Hopcroft, et al.

*Abstract*

Background: The coronavirus disease 2019 (COVID-19) vaccination programme in England was extended to include all adolescents and children by April 2022. The aim of this paper is to describe trends and variation in vaccine coverage in different clinical and demographic groups amongst adolescents and children in England by August 2022.

Methods: With the approval of NHS England, a cohort study was conducted of 3.21 million children and adolescents' records in general practice in England, in situ and within the infrastructure of the electronic health record software vendor TPP using OpenSAFELY. Vaccine coverage across various demographic (sex, deprivation index and ethnicity) and clinical (risk status) populations is described.

Results: Coverage is higher amongst adolescents than it is amongst children, with 53.5% adolescents and 10.8% children having received their first dose of the COVID-19 vaccine. Within those groups, coverage varies by ethnicity, deprivation index and risk status; there is no evidence of variation by sex.

Conclusion: First dose COVID-19 vaccine coverage is shown to vary amongst various demographic and clinical groups of children and adolescents.

**[Governance of research involving people with psychosocial disabilities](#)** [version 1; peer review: awaiting peer review]

Marisha Wickremsinhe, et al.

*Abstract*

Health-related research with human participants is governed by research ethics regulations in most jurisdictions. Globally, the 2016 International Ethical Guidelines for Health-related Research Involving Humans, published by the Council for International Organizations of Medical Sciences (CIOMS), are especially influential and widely held as an international standard. The CIOMS guidelines support the inclusion of people with psychosocial disabilities in research and offer clear guidance to promote their recruitment, including by outlining provisions for substitute decision-making. The CIOMS guidelines sit alongside the United Nations' Convention on the Rights of Persons with Disabilities (CRPD). Adopted in 2006 and ratified in 2008, the CRPD offers a robust framework for recognizing the rights of persons with disabilities, including individuals with psychosocial disabilities. Though the CRPD does not explicitly reference research inclusion, its core principles—especially pertaining to the right to universal legal capacity—have clear implications for research ethics governance, specifically with respect to the use of

substitute decision-making for research participation. In this paper, we review the extent to which existing research ethics regulations across selected jurisdictions concord with each of these two frameworks, offering first a broad analysis of regulations across 26 African countries, and then exploring two country-specific case studies from Malaysia and Peru. We find that, while many countries' research ethics regulations align with key aspects of the CIOMS guidelines, core principles of the CRPD are absent. Given the shortcomings of existing regulations, we analyse a key point of tension between CIOMS and the CRPD—the right to participate in research—and offer a proposal for revised regulations that aims to bridge this tension and meet the standards of both frameworks.

.....

CVEP is a program of the GE2P2 Global Foundation whose purpose and mission is to advance ethical and scientific rigor in research and evidence generation for governance, policy and practice in health, human rights action, humanitarian response, heritage stewardship, education and sustainable development. The Foundation serves governments, international agencies, INGOs, civil society organizations (CSOs), commercial entities, consortia and alliances.

Support for this service is provided by the Bill & Melinda Gates Foundation; the Bill & Melinda Gates Medical Research Institute, PATH, and industry resource members Janssen/J&J, Pfizer, Sanofi US, and Takeda, (list in formation).

Support is also provided by a growing list of individuals who use this membership service to support their roles in public health, clinical practice, government, NGOs and other international institutions, academia and research organizations, and industry.
