Ethics and Policy

Vaccines and Global Health: The Week in Review
24 June 2023 :: Issue 708
Center for Vaccine Ethics & Policy (CVEP)

This weekly digest targets news, events, announcements, articles and research in the vaccine and global health ethics and policy space and is aggregated from key governmental, NGO, international organization and industry sources, key peer-reviewed journals, and other media channels. This summary proceeds from the broad base of themes and issues monitored by the Center for Vaccine Ethics & Policy in its work: it is not intended to be exhaustive in its coverage.

Vaccines and Global Health: The Week in Review is published as a PDF and scheduled for release each Saturday [U.S.] at midnight [0000 GMT-5]. The PDF is posted at <https://centerforvaccineethicsandpolicy.net>. This blog allows full text searching of over 27,000 entries.

Gates Foundation and Agence Francaise de Développement Launch New Strategic Partnership to Help Advance Gender Equality and Human Development Across Africa and South Asia

ARIS (June 23, 2023) -- Melinda French Gates, co-chair of the Bill & Melinda Gates Foundation (BMGF), Remy Rioux, CEO of the Agence Française de Développement (AFD) and Chrysoula Zacharopoulou, Secretary of State, Ministry of Foreign Affairs announced the launch of a new strategic partnership funding projects supporting gender equality and human development across Africa and South Asia today at the Ministry of Foreign Affairs.

The partnership draws on up to \$240 million in funding, including a \$20 million grant from BMGF, matched by a \$20 million grant from AFD in addition to up to \$200 million of concessional lending. This partnership will support projects that focus on mother and child's health, sexual and reproductive health, social protection, water and sanitation, nutrition, and climate resilience.

Advancing Sustainable Development Goals (SDGs)

Worldwide, approximately 73 low and middle-income countries have high exposure and acute vulnerability to droughts, floods, increased variability and reductions in growing seasons. African economies are losing between \$7bn and \$15bn per year due to more frequent and intense extreme weather events, growing food insecurity, and environmental degradation. Similar situations are faced by communities across South Asia, as was the case during the devastating floods in Pakistan in 2022.

Women are more vulnerable to the impacts of those combined crises: they represent a high percentage of poor communities that are highly dependent on local natural resources for their livelihood and are 14 times more likely to die in a disaster than men, making it essential to increase impactful partnerships that improve development outcomes across the region.

Through the new partnership, BMGF will support AFD's investments in projects aligning with the national priorities of countries where they are implemented, helping build capacity among partners while generating measurable, sustainable impact.

"Our long-standing partnership with AFD and the French government on health and development is rooted in ensuring that more people, especially women and girls, can realize their full potential," said Melinda French Gates, co-chair of the Bill & Melinda Gates Foundation. "The launch of this Gender and Human Development partnership is an exciting step forward that will help ensure those that need it most have more power over their health, money and futures." ...

Multilateral development banks and WHO launch new investment platform to strengthen primary health care services

23 June 2023 *News release* Paris, France

In a landmark development aimed at investing in and strengthening essential, climate and crisis-resilient primary health care (PHC) services in low- and low-and-middle income countries (LICs and LMICs), **three multilateral development banks have joined with WHO to launch the new Health Impact Investment Platform.**

The Platform, launched during the Summit for a New Global Financing Pact being held in Paris, **will make an initial €1.5 billion available to LICs and LMICs in concessional loans and grants to expand the reach and scope of their PHC services, especially for the most vulnerable and underserved populations and communities.**

The African Development Bank (AfDB), European Investment Bank (EIB), Islamic Development Bank (IsDB) and WHO are the Platform's founding members. As this is a global challenge, the Inter-American Development Bank (IDB) is also considering joining this partnership in view to extending this initiative to the Latin America and the Caribbean region.

WHO will act as the Platform's policy coordinator, responsible for ensuring alignment of financing decisions with national health priorities and strategies. The Platform's secretariat will support governments to develop national health and prioritize PHC investment plans. The Platform will also aim to catalyse wider PHC investments in support of government health strategies.

Dr Tedros Adhanom Ghebreyesus, WHO Director-General, said a PHC approach offers the most effective means to improve health and well-being, including through the delivery of essential health services to all people. It is a driver of universal health coverage, one of the United Nations Sustainable Development Goals (SDGs). **World leaders committed in 2015 to achieve access to essential health-care services and affordable essential medicines and vaccines for all people by 2030.**

"Around 90% of essential health services can be delivered through PHC - on the ground, in communities, via health professionals, doctors and nurses, in local clinics. The broad spectrum of services that PHC provides can promote health and prevent disease, avoid and delay the need for more costly secondary and tertiary services, and deliver rehabilitation," said Dr Tedros. **"PHC serves as the 'eyes and ears' of a country's health system, reaching to the very communities where people live. The new Health Impact Investment Platform will strengthen the development of such services, serving as an invaluable investment in the health of populations today and in the future."**

...The new Platform builds on experience gained through cooperation between countries, multilateral organizations and development banks proved fruitful during the pandemic. For example, WHO, the EIB and the European Commission worked closely with Angola, Ethiopia and Rwanda to strengthen their health systems. Initially launched as stand-alone programs or as part of the countries' response to COVID-19, these interventions mobilized technical assistance, grants and investments with advantageous terms to build up primary health care...

[The One Health approach and Key Recommendations of the Quadripartite](#)

WHO Technical Brief

22 June 2023 | Technical document

[Download \(172.7 kB\)](#)

Overview

The Quadripartite (FAO, UNEO, WHO and WOA) with the secretariat chaired by WHO this year, has developed and launched a Joint Plan of Action and convened a Group of Friends¹ for One Health as part of its efforts to more effectively safeguard the health of humans, animals, plants, and the environment, addressing the full spectrum of risk mitigation and management – from prevention to detection, preparedness and response – and improving human, animal and ecosystem health while contributing to sustainable development.

Key messages

- The COVID-19 pandemic has demonstrated the need for a unified approach to address health threats arising from the imbalance between human activities and increased stress on our ecosystems. The One Health approach can help to sustainably balance and optimize the health of humans, animals, plants, and the environment.
- Despite the experience of multiple health challenges, disease outbreaks and epidemics, **investment in the One Health approach is limited, fragmented and unsustainable.**
- To prevent, prepare for and respond to emerging health challenges, all relevant sectors must collaborate in an integrated manner that breaks down the silos between sectors and disciplines. **Greater collaborative dialogue and joint actions are required between human, animal, plant and environment health organisations, as well as the financial sector, in order to secure the long-term investment needed.**
- **Strong political commitment is critical** to enable awareness raising and advocacy for One Health, and to develop mechanisms to support a One Health governance and coordination framework. A whole-of-society and whole-of-government approach is essential to achieve this.
- Comprehensive and regular assessment, monitoring and evaluation help to identify gaps and opportunities for progress. **Collaborative learning and integration of data and knowledge systems from relevant sectors and disciplines should underpin One Health action.**
- The Quadripartite One Health Joint Plan of Action can be used as a blueprint for action, adapted to national contexts and plans, and applied to all relevant sectors and levels.

[Global research agenda for antimicrobial resistance in human health](#)

WHO Policy brief

22 June 2023 | Publication

Overview

The global research agenda for antimicrobial resistance in human health **prioritizes 40 research topics for evidence generation to inform policy by 2030**. It aims to guide policy-makers, researchers, funders, implementing partners, industry and civil society in generating new evidence to inform antimicrobial resistance policies and interventions as part of efforts to address antimicrobial resistance, especially in low-and-middle-income countries.

Media Release

[WHO outlines 40 research priorities on antimicrobial resistance](#)

22 June 2023

WHO has published its first global research agenda for the world's scientists to address the most urgent human health priorities to combat antimicrobial resistance (AMR). It outlines **40 research topics on drug-resistant bacteria, fungi and Mycobacterium tuberculosis that must be answered by 2030, in line with the Sustainable Development Goals.**

The WHO Global Research Agenda for AMR in human health will catalyze innovation and implementation research, spanning the epidemiology, burden and drivers of AMR, context-specific and cost-effective strategies to prevent infections and emergence of resistance.

It will also involve the **discovery of new diagnostic tests and improved treatment regimens, the identification of cost-effective methods to collect data and translate it into policy**, as well as how to implement current interventions more efficiently in resource-limited settings. Ultimately, the generated evidence will inform policies and interventions to strengthen the response to antimicrobial resistance, particularly in low- and middle-income countries.

... Dr Silvia Bertagnolio, Unit Head in WHO AMR Division, said, "This first research agenda from WHO will provide the world's AMR researchers and funders with the most important topics to focus on and give the world its best chance to combat AMR."

The research agenda was developed based on a review of over 3000 relevant documents published over the past decade. The review identified 2000 unanswered questions or knowledge gaps, which were further consolidated and prioritized by a large group of AMR experts to conclude with the 40 most pivotal research topics...

PHEIC **Polio**

Polio this week as of 21 June 2023 - GPEI

Headlines:

:: The vast machinery of the global polio eradication programme is much like the inner workings of a clock – a network of interconnected people, organizations and programmes that together are more powerful than the sum of their parts. Collaboration is foundational to eradication, and every eradicator plays a part in edging the programme closer to its goals. [Read more...](#)

:: The brave women at all levels of the polio program bring us closer to a world without polio and a world with equitable opportunities for all women and girls. In the latest "Women Leaders in Polio" series, we feature two women; [Thongbotho Mphoyakgosi](#) and [Raquelina Mazuze](#) who are making great contributions in the fight against the disease.

Summary of new polioviruses this week:

:: Afghanistan: one WPV1 case

:: Benin: one cVDPV2 case

:: Madagascar: three cVDPV1 cases and one cVDPV1 positive environmental sample

:: Mali: one cVDPV2 case

June 21, 2023 News Release

The U.S. Department of Health and Human Services (HHS), through the Substance Abuse and Mental Health Services Administration (SAMHSA), issued a new advisory today: Identification and Management of Mental Health Symptoms and Conditions Associated with Long COVID.

“Long COVID has a range of burdensome physical symptoms, and can take a toll on a person’s mental health. It can be very challenging for a person, whether they are impacted themselves, or they are a caregiver for someone who is affected,” said HHS Secretary Xavier Becerra. “This advisory helps to raise awareness, especially among primary care practitioners and clinicians who are often the ones treating patients with Long COVID.”...

Draft report: [CIOMS WG XII For Comment 12June2023](#)

Posted: 03 June 2023 Comments deadline: 24th of July 2023

The WG will build on previous considerations established by CIOMS WG IV, incorporating the latest thinking in quantitative and qualitative approaches to the evaluation of benefit-risk (B-R), as well as assimilating visual presentations of benefits and risks to improve transparency and understanding amongst key stakeholders, including patients. The perspective of healthcare professionals and patients will be considered based on other ongoing initiatives as well as new guidelines from regulatory authorities and public-private partnerships.

[Real-World Data and Real-World Evidence in Regulatory Decision Making](#)

CIOMS Working Group XIII

Submissions deadline 14th of July 2023.

Draft: [CIOMS WG XIII 6June2023 Draft report for comment](#)

Background

There is increasing interest in the use of Real-World data (RWD) to support regulatory decision making across the product life cycle. Key sources of RWD are electronic health records, claims data, prescription data, and patient registries. Real-world evidence (RWE) is the clinical evidence about the usage and potential benefits or risks of a medical product derived from an analysis of RWD. For decades, such evidence has been well accepted for satisfying post-approval safety monitoring requirements but has not been used commonly to demonstrate drug effectiveness, which is a relatively new concept.

As applications are increasing, it is proposed that CIOMS develop a consensus report and recommendations for the use of RWD and RWE in regulatory decision-making related to biopharmaceutical products. This report will cover three key areas:

:: Articulate the different RWD/RWE requirements depending on the intent of use e.g. Regulatory, Payers, and Public Health;

:: Propose harmonized practices and guidance for using RWD and RWE for regulatory purposes (given that there are no existing consensus guidelines);
:: Articulate point of view (POV) on key ethical issues relevant to RWD and RWE and a provisional set of standards to address those issues (the high-level POV may lead to a separate/satellite group of ethicists to deal with it). Full Concept Note (31 March 2020)

[Journal Watch](#)

Vaccines and Global Health: The Week in Review continues its weekly scanning of key peer-reviewed journals to identify and cite articles, commentary and editorials, books reviews and other content supporting our focus on vaccine ethics and policy. Journal Watch is not intended to be exhaustive, but indicative of themes and issues the Center is actively tracking. We selectively provide full text of some

editorial and comment articles that are specifically relevant to our work. Successful access to some of the links provided may require subscription or other access arrangement unique to the publisher.

If you would like to suggest other journal titles to include in this service, please contact David Curry at: david.r.curry@centerforvaccineethicsandpolicy.org

Patient-Centered Transgender Surgical Care

The November 2016 issue of the journal, *Transgender Health*, focused on the importance of expanding gender-affirming health care services, enhancing the quality of transgender patients' clinical encounters, and improving general medical and mental health outcomes among gender diverse patients. This current issue follows up on that initial inquiry, delving specifically into relationships among autonomy protections and patient-centered informed consent and shared decision-making processes in gender-affirming surgical care.

[Decolonization of Global Health in Haiti: A Call for Equity, Partnerships, Scholarship, and Informed Action](#)

Dominique Guillaume, Regine Thermy, Candice Sternberg, Judith Seme, Tyra Montour, Balkys Bivins, Pepita Jean, Juanita Barnett and Guerda Nicolas

Global Health: Science and Practice June 2023, 11(3):e2200298; <https://doi.org/10.9745/GHSP-D-22-00298>

Haiti's current global health research architecture, led and implemented by foreigners far removed from Haiti, demonstrates the sector's "non-global" nature. Decolonization in Haiti must start by addressing the vast inequities that comprise this structure.

[Community Barriers, Enablers, and Normative Embedding of Second Year of Life Vaccination in Ghana: A Qualitative Study](#)

Brent Wolff, Raymond A. Aborigo, Maxwell Dalaba, Joseph K. L. Opare, Laura Conklin, George Bonsu and Kwame Amponsa-Achiano

Global Health: Science and Practice June 2023, 11(3):e2200496; <https://doi.org/10.9745/GHSP-D-22-00496>

Community perceptions of barriers and enablers to 2YL vaccination provide a snapshot of an active diffusion process as new practices gradually displace older embedded ones and practical costs and benefits of later vaccination are reevaluated.

[The Cost of Providing Comprehensive HIV Services to Key Populations: An Analysis of the LINKAGES Program in Kenya and Malawi](#)

Marjorie Opuni, Jose Luis Figueroa, Jorge Eduardo Sanchez-Morales, Andrea Salas-Ortiz, Luz Edith Ochoa-Sanchez, Mariana Morales-Vazquez, Louis Masankha Banda, Alice Olawo, Spy Munthali, Julius Korir, Meghan DiCarlo, Navindra Persaud and Sergio Bautista-Arredondo
Global Health: Science and Practice June 2023, 11(3):e2200538; <https://doi.org/10.9745/GHSP-D-22-00538>

A cost analysis of comprehensive HIV services for key populations at higher risk of infection in Kenya and Malawi showed that costs can be substantial at all program implementation levels, not just service delivery; all these costs should be considered during program planning.

Health and Human Rights

Volume 25, Issue 1, June 2023,

<https://www.hhrjournal.org/special-section-global-voices-for-global-equity-expanding-right-to-health-frameworks/>

Special Section: Global Voices for Global Justice: Expanding Right to Health Frameworks

...The papers in this special section work together to move toward a global social medicine for the 22nd century. They envision a global social medicine that confronts and moves beyond the traditionally colonial, xenophobic, heteronormative, patriarchal, gender-binary-bound, capitalist, and racist histories of the fields of global health and human rights. They seek to instantiate a global social medicine that centers knowledge and experiences from the Global South and works toward social justice and health equity at scale. In this special section, the authors are particularly interested in understanding, challenging, and expanding our perspectives and enactments of the right to health. Unlike neoliberal perspectives on health that often limit their explanatory capacity to how individuals behave in the world, the papers here move beyond the focus on lifestyles and on the phantasmagoria of a sovereign subject with supposedly free agency. Instead, authors work toward critical consciousness that accounts for structural processes—with their inequities and disruptions, as well as their effects on individuals—and how this consciousness can open new horizons for collective transformation and social emancipation in health...

[Correlates of support for international vaccine solidarity during the COVID-19 pandemic: Cross-sectional survey evidence from Germany](#)

Florian Stoeckel, Jack Thompson, Paula Szewach, Sabrina Stöckli, Matthew Barnfield, Joseph B. Phillips, Benjamin Lyons, Vittorio Mérola, Jason Reifler

Research Article | published 23 Jun 2023 PLOS ONE

<https://doi.org/10.1371/journal.pone.0287257>

Abstract

During the COVID-19 pandemic, many residents of high-income countries (HICs) were eligible for COVID-19 vaccine boosters, while many residents of lower-income countries (LICs) had not yet received a first dose. HICs made some efforts to contribute to COVID-19 vaccination efforts in LICs, but these efforts were limited in scale. A new literature discusses the normative importance of an international redistribution of vaccines. Our analysis contributes an empirical perspective on the willingness of citizens in a HIC to contribute to such efforts (which we term international vaccine solidarity). We analyse the levels and predictors of international vaccine solidarity. We surveyed a representative sample of German adults ($n = 2019$) who participated in a two-wave YouGov online survey (w1: Sep 13–21, 2021 and w2: Oct 4–13, 2021). International vaccine solidarity is measured by asking respondents preferences for sharing vaccine supplies internationally versus using that supply as boosters for the domestic population. We examine a set of pre-registered hypotheses. Almost half of the respondents in our sample (48%) prioritize giving doses to citizens in less developed countries. A third of respondents (33%) prefer to use available doses as boosters domestically, and a fifth of respondents (19%) did not report a preference. In line with our hypotheses, respondents higher in cosmopolitanism and empathy, and those who support domestic redistribution exhibit more support for international dose-sharing. Older respondents (who might be more at risk) do not consistently show less support for vaccine solidarity. These results help us to get a better understanding of the way citizens' form preferences about a mechanism that redistributes medical supplies internationally during a global crisis.

[From Conspiracy to Hesitancy: The Longitudinal Impact of COVID-19 Vaccine Conspiracy Theories on Perceived Vaccine Effectiveness](#)

by [Camila Salazar-Fernández](#), et al.

Vaccines 2023, 11(7), 1150; <https://doi.org/10.3390/vaccines11071150> (registering DOI)

Received: 8 May 2023 / Revised: 17 June 2023 / Accepted: 23 June 2023 / Published: 25 June 2023

Abstract

The embrace of coronavirus disease 2019 (COVID-19) vaccine conspiracies has been linked to vaccine hesitancy. This study aimed to investigate the relationship between COVID-19 vaccine conspiracy theories and perceived vaccine effectiveness. The study utilized a longitudinal follow-up study in which adults in Chile completed surveys in December 2020 (T1) and May 2021 (T2). The psychometric properties of the five-item instrument on conspiracy theories for the COVID-19 vaccine were evaluated using data from T1 (n = 578). A confirmatory one-factor structure with suitable indicators of reliability was found. The longitudinal analysis (n = 292) revealed that conspiracy theories about the COVID-19 vaccine in T1 were associated with lower beliefs in its effectiveness in T2. However, no significant association was found between beliefs in effectiveness in T1 and conspiracy theories in T2. The study suggests that beliefs in conspiracy theories may temporally precede beliefs in vaccine effectiveness for COVID-19. The results have implications for strategies to address vaccine conspiracy beliefs and their implementation at the public policy level.

Pandemic Vaccination Strategies: Global Optimization

James Thompson, Fernando Benitez-Paez, Omar Guerrero

medRxiv 2023.06.13.23291327; doi: <https://doi.org/10.1101/2023.06.13.23291327>

Abstract

In the event of a global pandemic, caused by an infectious disease of humans, we consider the scenario in which a safe and effective vaccine is available, with limited supply. We then investigate the optimal distribution of doses across countries and age groups. We employ a system of SIR equations to model the pandemic dynamics and utilize genetic algorithms to identify optimal allocations that minimize either total infections or total deaths. Our findings reveal that strategies aimed at reducing infections differ from those aimed at reducing deaths, with neither strategy advocating proportional dose allocation between countries based on population size. Our findings moreover bring to light potential ethical challenges associated with the implementation of strategy optimization.

Covid19Vaxplorer: a free, online, user-friendly COVID-19 Vaccine Allocation Comparison Tool

Imelda Trejo, Pei-Yao Hung, Laura Matrajt

medRxiv 2023.06.15.23291472; doi: <https://doi.org/10.1101/2023.06.15.23291472>

Background There are many COVID-19 vaccines currently available, however, Low- and middle-income countries (LMIC) still have large proportions of their populations unvaccinated. Decision-makers need to take decisions as of how best to allocate available vaccine (e.g. boosters or primary series vaccination, which age groups to target) but LMIC often lack the resources to undergo quantitative analyses of vaccine allocation, resulting in ad-hoc policies. We developed Covid19Vexplorer (<https://covid19vexplorer.fredhutch.org/>), a free, user-friendly online tool that simulates region-specific COVID-19 epidemics in conjunction with vaccination.

[A unified framework for estimating country-specific cumulative incidence for 18 diseases stratified by polygenic risk](#)

medRxiv 2023.06.12.23291186; doi: <https://doi.org/10.1101/2023.06.12.23291186>

Abstract

Polygenic Scores (PGSs) offer the ability to predict genetic risk for complex disease across the life course; a key benefit over short-term prediction models. To produce risk estimates relevant for clinical and public health decision making, it is important to account for any varying effects due to common risk factors such as age and sex. Here, we develop a novel framework to estimate for cumulative incidences over the life course and produce country-, age-, and sex-specific estimates of cumulative incidence stratified by PGS for 18 high-burden diseases by integrating PGS associations from 7 studies in 4 countries (N=1,197,129) with disease incidences from the Global Burden of Disease. PGSs had a significant sex-specific effect for 5 diseases (asthma, hip osteoarthritis, gout, coronary heart disease, type 2 diabetes) with all but type 2 diabetes exhibiting a larger effect in men. PGS had a larger effect in younger individuals for 13 diseases, with the effects decreasing linearly with age. We showed for breast cancer that, relative to individuals in the bottom 20% of polygenic risk, the top 5% attain an absolute risk for screening eligibility 16.3 years earlier. For T2D, men and women in the top 1% reached the threshold aged 24.8 (95% CI: 22.5 – 27.6) and 22.3 (95% CI: 20.0 – 25.3) respectively. Individuals in the bottom 1% of PGS did not reach the risk threshold by age 80. Our easily extendable framework increases the generalizability of results from biobank studies and the accuracy of absolute risk estimates by appropriately accounting age and sex-specific PGS effects. Our results highlight the potential of PGS as a screening tool which may assist in the early prevention of common disease.
