

Vaccines and Global Health: The Week in Review 14 October 2023 :: Issue 722 Center for Vaccine Ethics & Policy (CVEP)

This weekly digest targets news, events, announcements, articles and research in the vaccine and global health ethics and policy space and is aggregated from key governmental, NGO, international organization and industry sources, key peer-reviewed journals, and other media channels. This summary proceeds from the broad base of themes and issues monitored by the Center for Vaccine Ethics & Policy in its work: it is not intended to be exhaustive in its coverage.

Vaccines and Global Health: The Week in Review is published as a PDF and scheduled for release each Saturday [U.S.] at midnight [0000 GMT-5]. The PDF is posted at https://centerforvaccineethicsandpolicy.net. This blog allows full text searching of over 27,000 entries.

Comments and suggestions should be directed to

New Funding, to Protect 370 Million Children from Polio Every Year, Puts World on Verge of Eradicating Polio Once and for All

Press release

BRUSSELS (October 11, 2023) – Today, **the European Commission**, **the European Investment Bank and the Bill & Melinda Gates Foundation announced a new financing partnership** to address critical global health opportunities: eradicating polio and ensuring that innovations in health are more accessible to the people who need them most.

The World Health Organization and UNICEF, as implementing partners for the polio funding, will deploy the resources to eradicate polio, support the distribution of other childhood immunizations and strengthen health systems so they are better able to respond to emerging health threats.

The expected €1.1 billion financing package aims to provide new funding to eradicate a human disease for only the second time in history and help solve the health and development challenges faced by the world's most vulnerable people, who otherwise do not get fair access to healthcare services and innovations.

President of the European Commission Ursula von der Leyen said: "We are about to wipe polio off the face of the Earth. The European Commission, the EIB and the Bill & Melinda Gates Foundation are partnering to get through the final stretch. With 1 billion euros supported by our European investment strategy Global Gateway, we will invest in stronger health systems globally and local vaccine and medicines production, manufacturing and administration, where it is most needed. Global cooperation has helped us put an end to the COVID-19 pandemic. Now it will help us get rid of polio once and for all."...

To promote swift progress towards eradicating wild poliovirus, the partnership aims to deliver €500 million in payments to the Global Polio Eradication Initiative — specifically the World Health Organization and UNICEF. The funds will cover polio vaccinations for nearly 370 million children annually; deliver vital health services to children alongside polio campaigns, including measles vaccines and other routine immunizations; and strengthen health systems to better prepare and respond to emerging health threats, as the polio program has done against COVID-19, Ebola, and other diseases. Today, wild poliovirus remains endemic in just two countries — Pakistan and Afghanistan — and 80% of variant poliovirus cases are found in just four subnational regions.

"Thanks to medical innovations, the world eradicated one human disease – smallpox. Today we're on the verge of ending another – wild poliovirus. I am committed to ensuring that no child, anywhere in the world, faces this awful disease. I am also optimistic that we will eradicate polio once and for all and make health innovations more accessible for everyone, particularly those in the poorest countries," said Bill Gates, co-chair of the Bill & Melinda Gates Foundation.

Another €500 million aims to expand the innovation capacity of health systems in lowand middle-income countries. This includes new funding to initiatives supported by the European Commission such as efforts to make health innovations like mRNA-based vaccines and therapeutics more accessible to people in low- and middle-income countries, under Europe's investment plan for the world, Global Gateway. More investments in health worldwide will be discussed among global leaders and partners at the upcoming <u>Global Gateway Forum</u> (25-26 October).

"Thanks to the leadership and partnership of the European Commission and European Investment Bank, vaccines, medicines and other life-saving innovations should reach the people who need them most, making communities everywhere healthier. We know that when a community is healthy, economies grow," said Melinda French Gates, co-chair of the Bill & Melinda Gates Foundation.

"Reaching un- or under-vaccinated children in the most remote and hardest-to-reach areas is essential for finishing the job of polio eradication," said Dr Tedros Adhanom Ghebreyesus, WHO Director-General. "These new funds will not only help to drive us towards a polio-free world, but will also help to build more sustainable and resilient health systems to protect the same children and communities who are at risk of polio against the many other health threats they face."

"Polio eradication is within reach, but the progress is fragile, and we must remain laser focused," said UNICEF Executive Director Catherine Russell. "This new funding will help ensure that all children get vaccinated to eradicate polio, while strengthening community-based health systems. No child should suffer from an easily preventable disease."

Specifically, the funding partnership is expected to include:

- €500 million in new funding for the Global Polio Eradication Initiative (as outlined above).
- €500 million in investments and grants to ensure health innovations are more accessible, strengthen health systems and prepare for future pandemics: The Bill & Melinda Gates Foundation plans to provide €250 million of grants and investments to match a €250 million in investments made by the European Investment Bank and guaranteed by the European Fund for Sustainable Development plus.
- **€80 million grants for Technical Assistance**: The Bill & Melinda Gates Foundation expects to match €40 million in grants from the European Commission to provide technical assistance and ensure that global health programs achieve their full potential.

The partnership announced today builds from existing partnerships between the Bill & Melinda Gates Foundation and the European Commission and Member States, including a €100 million support package for the recently established African Medicines Agency (AMA) and national African medicines regulatory agencies or regional initiatives, the African Health Diagnostics Platform, which supports African partners to increase access and reduce costs of laboratory testing, and coordination on health initiatives such as <u>COVAX</u>, a global collaboration to accelerate the development, production, and equitable access to COVID-19 tests, treatments, and vaccines.

Gates Foundation Celebrates 20 Years of "Grand Challenges" With New Investments and a Call to Make R&D Breakthroughs Available More Quickly and Equitably Commitments focus on advancing equitable access to artificial intelligence (AI) and vaccines, and catalyzing innovations that address women's health

DAKAR and SEATTLE (October 10, 2023) – A slate of new initiatives to support locally led innovation was announced today in Dakar by the Bill & Melinda Gates Foundation and its partners at the Grand Challenges Annual Meeting. The investments come with an urgent call for countries to step up

funding to make the research and development (R&D) of health and development innovations easier and faster, and to make the next generation of scientific and technological breakthroughs relevant and accessible to all.

Data shows that while overall health R&D funding is increasing, only about 2% is directed toward diseases that affect the world's poorest people. In 2020, the annual funding gap for product development targeting poverty-related and neglected diseases was estimated at US\$2.6 billion...

In an address to the more than 1,400 scientists, policymakers, and donors attending the annual meeting, Bill Gates, co-chair of the Gates Foundation, called for the world to spend at least US\$3 billion more every year on global health and development R&D in order to close the critical gaps in funding for neglected diseases...

Today, **Gates announced that the foundation is investing US\$30 million to support a new artificial intelligence (AI) platform in Africa**. The platform will provide African scientists and innovators with the technical and operational support they need to turn promising ideas into scalable health and development solutions. It is a step towards ensuring the benefits of AI are relevant, affordable, and accessible to everyone—particularly those in low- and middle-income countries (LMICs)—and that these critical tools are developed safely, ethically, and equitably. The foundation will continue to work closely with technical partners and governments to further advance the platform and identify opportunities to jointly advance the use of AI for health and development.

Yesterday, the foundation also <u>announced new investments</u> aimed at expanding access to a novel mRNA vaccine manufacturing platform that gives countries, including Senegal and South Africa, the technology to develop and manufacture their own vaccines. mRNA technology is considered a potential game-changer for a range of infectious diseases, including tuberculosis, malaria, and Lassa fever, which disproportionately affect people in LMICs. This additional local vaccine manufacturing capacity will support LMICs to develop low-cost, high-quality vaccines that address their most urgent health priorities...

Grand Challenges is supported by the governments of China, India, Brazil, the United States, and Canada, as well as a growing number of countries in Africa, including Ethiopia, Rwanda, Senegal, and South Africa. Since 2003, partners have invested US\$1.6 billion to support more than 3,800 projects in 118 countries—from new strategies to improve gut health in moms and children to reinventing the toilet for improved sanitation to reimagining drug discovery research for malaria, tuberculosis, and neglected tropical diseases.

To further support scientists developing cutting-edge innovations in LMICs, the foundation and its partners also issued new calls for proposals in the following areas:

- Equitable AI for health in LMICs. Building on a recent Grand Challenge (GC) to develop global health and development solutions in LMICs using AI-enabled large language models (LLMs), GC partners issued a request for proposals of up to US\$5.5 million to help advance the development of robust, locally relevant, AI-empowered tools to expedite decision-making, policy pathways, and implementation by frontline health workers and policymakers. The call is led by GC Brazil, GC India, GC Ethiopia, GC Senegal, GC South Africa, and GC Africa, with support from GC Canada, the Patrick J. McGovern Foundation, the Pasteur Network, and the Gates Foundation.
- **Women's health R&D** to unlock the potential of half the world's population and unleash a powerful engine for progress. The <u>Women's Health Innovation Opportunity Map 2023</u> is a new report outlining 50 equitable, high-return opportunities across the R&D continuum to maximize research and innovation, investments, and global action in women's health. To encourage

- innovations and ideas laid out in the Opportunity Map, the foundation announced a new request for proposals that will provide up to US\$3.6 million in funding.
- **Innovations in global health and development across other critical areas of need.** The full list of new requests for proposals can be found here...

Gates Foundation to Accelerate mRNA Vaccine Innovation and Manufacturing in Africa and Globally

Press release

DAKAR (October 9, 2023) – Today at the 2023 Grand Challenges Annual Meeting, Bill Gates, Cochair of the Bill & Melinda Gates Foundation, announced **new investments to advance access to mRNA research and vaccine manufacturing technology that will support low- and middle-income countries' (LMICs)** capacity to develop high-quality, lifesaving vaccines at scale.

The move builds on lessons the foundation has learned from more than 20 years of working with vaccine manufacturers in LMICs and the opportunity to leverage recent scientific advances to develop low-cost, high-quality health tools that reach more people around the world. mRNA technology is considered a potential game-changer for a range of infectious diseases, including tuberculosis, malaria, and Lassa fever, which disproportionately affect people in LMICs. This new technology can significantly lower the costs of mRNA research and manufacturing and enable expanded access—helping to close critical gaps...

...The foundation announced a total of US\$40 million in funding to advance access to Quantoom Biosciences' low-cost, mRNA research and manufacturing platform, which was developed with an early-research Grand Challenges grant made to its parent company, Univercells.

The Institut Pasteur de Dakar (IPD) and Biovac, research institutes with vaccine manufacturing experience based in Senegal and South Africa, respectively, will receive US\$5 million each to acquire the technology and will be able to use it to develop locally relevant vaccines. To further advance the technology and lower costs for commercialization, the foundation also will provide US\$20 million to Quantoom Biosciences, ensuring LMICs can benefit from the next-generation mRNA health tools. The Gates Foundation will grant another US\$10 million to other LMIC vaccine manufacturers to be named. This new funding builds on the foundation's previous US\$55 million investment in mRNA manufacturing technology.

"Expanding our capacity to discover and manufacture affordable mRNA vaccines in Africa is an important and necessary step towards vaccine self-reliance in the region," said Dr. Amadou Sall, CEO of IPD. "We welcome this new funding, which will promote the development of lifesaving technologies on the continent while also contributing to global health security by expanding the supply and access to vaccines—allowing us to achieve greater health equity worldwide."...

Quantoom's modular mRNA technology addresses common bottlenecks in current mRNA research and manufacturing technologies, making it simpler and cheaper to use. For example, the cost to produce a vaccine could drop by more than 50% with Quantoom's platform compared to traditional mRNA technology. It could also significantly reduce the need for deeply trained experts, which continues to be a barrier to vaccine production in Africa and elsewhere, while maintaining or even increasing the quality of the product...

Public Consultations/Call for Papers

<u>Call for Contributions - OHCHR analytical study on key challenges in ensuring access to medicines, vaccines and other health products (HRC resolution 50/13)</u>

Office of the High Commissioner for Human Rights | Call for input | Treaty bodies

Deadline: 30 November 2023

Purpose:

To inform the OHCHR analytical study on key challenges in ensuring access to medicines, vaccines and other health products (HRC resolution 50/13)

Background:

Vaccine equity and access to medicines is a fundamental component of the full realization of the right to health. Vaccines, medicines and other health products must not only be produced and made available - they must also be accessible to all persons. Yet, access to vaccines, medicines and other health products remains disturbingly uneven in many places.

Council resolution 50/13 requests the Office of the High Commissioner for Human Rights (OHCHR) to prepare an analytical study on key challenges in ensuring access to medicines, vaccines and other health products to be presented to the Human Rights Council at the fifty-sixth session in June 2024. In order to collect inputs for this forthcoming report, OHCHR has published a short questionnaire available in English, Français and Español.

Polio - PHEIC

Polio this week as of 11 Oct 2023 - GPEI

Headlines [Selected]

- :: The Global Polio Eradication Initiative congratulates <u>Dr Hanan Balkhy</u>, for her nomination as the next WHO Regional Director for the Eastern Mediterranean (EMRO), and the first female Regional Director for this Region. This is a historic decision by the Member States and well-deserved. We look forward to working with her, in securing a lasting polio-free EMRO in the very near future. :: European leaders pledge €500 million to deliver a healthier, polio-free world In Brussels this week, the European Commission (EC), the European Investment Bank (EIB) and the Bill & Melinda Gates Foundation (BMGF), along with the World Health Organization (WHO) and the United Nations Children's Fund (UNICEF) announced a new financing partnership of over €1 billion to advance polio
- Children's Fund (UNICEF) announced a new financing partnership of over €1 billion to advance polio eradication efforts and strengthen healthcare systems. This partnership will provide €500 million in new funding to the Global Polio Eradication Initiative (GPEI) specifically to its implementing partners, WHO and UNICEF and €500 million to programmes that expand innovation and research capacity in low- and middle-income countries. More.
- :: Member States urged to go all in to end polio, during meeting of EMRO Regional Subcommittee for Polio Eradication and Outbreaks. More.
- :: In the lead-up to World Polio Day on 24 October, GPEI has launched a Make Polio History campaign to rally existing and new supporters of polio eradication from all over the world to champion the cause. We need your help! Add your voice in support of eradication by visiting the <u>campaign website</u> and taking action.
- :: Rotary International PolioPlus Bigger than Polio: click <u>here</u> to read an article from Rotary International, about Pakistan's female vaccinators doing more than helping end a disease.

Summary of new polioviruses this week, cases and positive environmental isolates:

- Afghanistan: six WPV1-positive environmental samples
- Pakistan: one WPV1 case and four WPV1-positive environmental samples

- Algeria: one cVDPV2-positive environmental sample
- Cameroon: one cVDPV2-positive environmental sample
- Chad: one cVDPV2 case
- DR Congo: 12 cVDPV1 cases, seven cVDPV2 cases and six cVDPV2-positive environmental samples
- Guinea: two cVDPV2 cases and one cVDPV2-positive environmental sample
- Nigeria: two cVDPV2 cases and five cVDPV2-environmental samples

HHS and Pfizer Reach Agreement to Increase Patient Access to Paxlovid

October 13, 2023 News Release

... Key features of today's agreement are:

- Protecting individuals in public programs, particularly Medicare. Individuals on Medicare, Medicaid, and those who are uninsured will continue to be able to access HHS-procured Paxlovid for free through the end of 2024 via a patient assistance program. From 2025-2028, Pfizer will continue to run a patient assistance program for individuals who are uninsured or underinsured with HHS-procured Paxlovid. In parallel, Pfizer will operate a copay assistance program for individuals with commercial insurance through 2028.
- Ensuring no HHS-procured product is lost to expiry. Up-to-date product will be refreshed from Pfizer through 2028, ensuring that the HHS inventory of Paxlovid will not expire and will include all new formulations of Paxlovid authorized or approved for use in the U.S.
- Creating a stockpile for future emergencies. In addition to ensuring that HHS maintains every course of Paxlovid that it has purchased, Pfizer will provide HHS with a stockpile of an additional one million treatment courses to ensure preparedness for future COVID-19 surges.

Providing a smooth transition to the commercial market. HHS will ensure a smooth and
predictable transition to the commercial market over the next few months while prioritizing
and reserving our HHS-procured treatment courses for people with Medicare and Medicaid,
and for those who are uninsured. During this transition to commercial distribution, Paxlovid
will remain available for ordering from HHS through December 15, 2023...

<u>Project NextGen Selects Initial Vaccine Candidates and Awards Over \$500 Million to Advance Development of Vaccines and Therapeutics</u>

October 13, 2023 News Release

...All three next-generation vaccine selections announced today are distinct from each other, targeting stronger, broader, or longer-lasting immune responses. Intranasal vaccines have the potential to stop viruses at the site of infection and self-amplifying mRNA and additional antigens may generate a stronger immune response than current vaccine technologies. The awards announced today will support companies as they prepare their vaccine candidates for Phase 2b clinical evaluation:

- \$8.5 million to CastleVax for a vector-based intranasal vaccine candidate.
- \$10 million to Codagenix for a live-attenuated intranasal vaccine candidate.
- \$10 million to Gritstone Bio for a self-amplifying mRNA vaccine candidate...

Global Health Innovative Technology Fund and Institut Pasteur de Dakar Announce New Partnership to Advance Research and Development for New Diagnostics and Vaccines in LMICs

... Building on their respective expertise and resources, GHIT Fund and IPD will collaborate to foster the development of cutting-edge solutions to combat infectious diseases in Africa and beyond. Through this new partnership, the two institutions will accelerate product development for neglected diseases in LMICs in the areas of therapeutics, vaccine and diagnostic research and development and strengthen collaboration to support low-cost vaccine and diagnostics manufacturing in LMICs through technology transfer and know-how sharing from/with Japanese pharmaceutical companies and academia. This will not only improve access to essential health technologies, but also contribute to the development of a sustainable local health infrastructure...

Public Consultation: ICH E6(R3) Principles, Annex 1 and Annex 2

The E6(R3) EWG is working on the revision of the E6(R2) Guideline "Good Clinical Practice" (GCP) with a view to addressing the application of GCP principles to the increasingly diverse trial types and data sources being employed to support regulatory and healthcare related decision-making on drugs, and provide flexibility whenever appropriate to facilitate the use of technological innovations

in clinical trials. Additional information may also be found in ICH Reflection Paper on "GCP Renovation" on the <u>ICH Reflection Paper page</u>. When complete, E6(R3) will be composed of an overarching principles and objectives document, Annex 1 and Annex 2.

The dual burden of inequality and disaster-risk

On this International Day, we take a closer look at the link between inequality, disaster resilience, and the urgent need for equitable solutions. Join our discussion with Hélène Jacot des Combes, the new Project Manager at the International Science Council, as we discuss the complex dynamics at play between inequality and disasters.

<u>UNICEF signs deal to deliver new malaria vaccine in breakthrough for child survival</u>

https://www.unicef.org/press-releases/unicef-signs-deal-deliver-new-malaria-vaccine-breakthrough-child-survival

NEW YORK/COPENHAGEN, 12 October – UNICEF today announced an agreement to secure supply of the world's second malaria vaccine, R21/Matrix-M. The deal is a major milestone towards meeting the high demand for doses of new vaccines against malaria – a disease which still kills one child under five every minute. The long-term agreement signed with...

World Physicians Stress The Need of Ethical Use of Medical Technology

11th October 2023

The World Medical Association is taking a leading role in addressing the ethical implications brought by the rapid advancements in medical technology. Today, WMA announces a revised version of its Declaration on Medical Ethics and Advanced Medical Technology, a landmark initiative underscoring the organization's dedication to ensuring that medical technology serves humanity with the highest ethical standards.

"In light of the ever-evolving medical technology landscape, our ethical guidelines must evolve in tandem. We must ensure the well-being of patients remains at the center of our actions, and the integrity of the medical profession remains reliable. Our unwavering commitment to principles such as human dignity, patient autonomy, confidentiality, privacy, and fairness must serve as our guiding principles in the development and application of medical technology." said Dr. Jung Yul Park, Chair of the World Medical Association.

The Declaration further underscores the importance of upholding professional and clinical independence among physicians, necessitating ongoing professional development to ensure proficiency in the use of medical technology, active involvement in research and development, and maintaining their role as experts in shared decision-making processes.

The WMA urges the medical community to maintain stringent standards when developing and implementing innovative practices and technologies. This entails the conscientious and responsible utilization of medical technology.

Declaration on Medical Ethics and Advanced Medical Technology

Adopted by the 53rd WMA General Assembly, Washington, DC, USA, October 2002, and revised by the 63rd WMA General Assembly, Bangkok, Thailand, October 2012 and by the 74th WMA General Assembly, Kigali, Rwanda, October 2023

Journal Watch

Vaccines and Global Health: The Week in Review continues its weekly scanning of key peer-reviewed journals to identify and cite articles, commentary and editorials, books reviews and other content supporting our focus on vaccine ethics and policy. Journal Watch is not intended to be exhaustive, but indicative of themes and issues the Center is actively tracking. We selectively provide full text of some editorial and comment articles that are specifically relevant to our work. Successful access to some of the links provided may require subscription or other access arrangement unique to the publisher.

If you would like to suggest other journal titles to include in this service, please contact David Curry at: david.r.curry@centerforvaccineethicsandpolicy.org

Geriatric Psychiatry

Twenty percent of the US population is expected to be 65 years of age or older by 2030. Ageism's pervasiveness in US culture means it is also pervasive in health care and a cause of inequity that profoundly undermines older adults' quality of life. Independence and autonomy losses tend to accompany aging for all of us. Older adults are vulnerable to exploitation and are exposed to latelife stressors that affect their mental health, accompany compromise or loss of independence and autonomy, and tend to track declines in general health and cognitive function. This theme issue investigates reasons why diminishing numbers of geriatric mental health clinicians should draw clinical, ethical, and legal attention to whether and how well US health care and its workforce is prepared to deliver the volume and quality of care older adults deserve.

Constructive correction

Bernd Pulverer

A fundamental tenet of the scientific process is that science is self-correcting. Efficient correction of the scientific literature requires a more nuanced set of policies and tools that lower the bar to author self-correction. The community has to embrace correction as a signal of scholarly quality.

Health and Human Rights

Volume 25, Issue 1, June 2023,

https://www.hhrjournal.org/special-section-global-voices-for-global-equity-expanding-right-to-health-frameworks/

Special Section: Global Voices for Global Justice: Expanding Right to Health Frameworks

...The papers in this special section work together to move toward a global social medicine for the 22nd century. They envision a global social medicine that confronts and moves beyond the traditionally colonial, xenophobic, heteronormative, patriarchal, gender-binary-bound, capitalist, and racist histories of the fields of global health and human rights. They seek to instantiate a global social medicine that centers knowledge and experiences from the Global South and works toward social justice and health equity at scale. In this special section, the authors are particularly interested in understanding, challenging, and expanding our perspectives and enactments of the right to health. Unlike neoliberal perspectives on health that often limit their explanatory capacity to how individuals behave in the world, the papers here move beyond the focus on lifestyles and on the phantasmagoria of a sovereign subject with supposedly free agency. Instead, authors work toward critical consciousness that accounts for structural processes—with their inequities and disruptions, as well as their effects on individuals—and how this consciousness can open new horizons for collective transformation and social emancipation in health...

Privacy, Parental Consent, and Relational Autonomy

Rosemary Claire Roden, Sheryl Ryan Published in issue: October 2023 p616-617

... The clinical practice of adolescent medicine hinges on balancing adolescent confidentiality and autonomy with the need to support an adolescent's relational autonomy, which occurs within the family context and the social structures in which they reside [[7][11]]. Even as we strive to ensure the agency of every adolescent and young adult as their own primary decision-maker, we also know that adolescent autonomy exists within a broader social context. The families that do not allow confidential care may be those where we worry about the autonomy and safety of the patient, even as we also need to acknowledge the reliance of teens on their families and communities to help them make decisions [[11]]. The finding that the overwhelming majority of parents in a conservative state that has passed laws that do not support adolescents as autonomous health—care decision-makers [[1],[10]] provides a bright spot in the otherwise bleak landscape of legislation surrounding adolescent health care. State legislatures and governing bodies may be seeking to

curtail an adolescent's right to privacy, but this does not mean that parents agree with these laws or judicial decisions....

The community of the DAO

...The decentralized science movement hopes to become an alternative funding and knowledge-sharing model for scientists. This movement began to gain traction in 2021 with the emergence of several biotech-focused decentralized autonomous organizations (DAOs) that use blockchain technology to orchestrate and log their activities. They employ tokens for fundraising purposes, amassing a treasury that is directly used for research funding. The tokens also serve as a voting mechanism, allowing community members to determine to which projects the accumulated treasury will be allocated. At the core of this community are research scientists, clinicians, entrepreneurs, patients and members of the public who are interested in advancing a scientific field...

<u>Human-specific genetics: new tools to explore the molecular and cellular basis of human evolution</u>

In this Review, the authors discuss our latest understanding of evolutionary genetic changes that are specific to humans, which might endow uniquely human traits and capabilities. They describe how new cellular and molecular approaches are helping to decipher the functional implications of these human-specific changes.

Safety and immunogenicity of varied doses of R21/Matrix-M™ vaccine at three years follow-up: A phase 1b age de-escalation, dose-escalation trial in adults, children, and infants in Kilifi-Kenya [version 1; peer review: awaiting peer review]
Samuel Sang, et al.

Abstract

Background: Falciparum malaria remains a global health problem. Two vaccines, based on the circumsporozoite antigen, are available. RTS, S/AS01 was recommended for use in 2021 following the advice of the World Health Organisation (WHO) Strategic Advisory Group of Experts (SAGE) on Immunization and WHO Malaria Policy Advisory Group (MPAG). It has since been pre-qualified in 2022 by the WHO. R21 is similar to RTS, S/AS01, and recently licensed in Nigeria, Ghana and Burkina Faso following Phase 3 trial results.

Methods: We conducted a Phase 1b age de-escalation, dose escalation bridging study after a change in the manufacturing process for R21. We recruited healthy adults and children and used a three dose primary vaccination series with a booster dose at 1–2 years. Variable doses of R21 and adjuvant (Matrix-M $^{\text{TM}}$) were administered at 10µgR21/50 µg Matrix-M $^{\text{TM}}$, 5µgR21/25µg Matrix-M $^{\text{TM}}$ and 5µgR21/50µg Matrix-M $^{\text{TM}}$ to 20 adults, 20 children, and 51 infants.

Results: Self-limiting adverse events were reported relating to the injection site and mild systemic symptoms. Two serious adverse events were reported, neither linked to vaccination. High levels of

IgG antibodies to the circumsporozoite antigen were induced, and geometric mean titres in infants, the target group, were 1.1 (0.9 to 1.3) EU/mL at day 0, 10175 (7724 to 13404) EU/mL at day 84 and (following a booster dose at day 421) 6792 (5310 to 8687) EU/mL at day 456.

Conclusions: R21/Matrix-M™ is safe, and immunogenic when given at varied doses with the peak immune response seen in infants 28 days after a three dose primary vaccination series given four weeks apart. Antibody responses were restored 28 days after a 4th dose given one year post a three dose primary series in the young children and infants.

Registration: Clinicaltrials.gov (NCT03580824; 9th of July 2018; Pan African Clinical Trials Registry (PACTR202105682956280; 17th May 2021).

::::::

CVEP is a program of the <u>GE2P2 Global Foundation</u> whose purpose and mission is to advance ethical and scientific rigor in research and evidence generation for governance, policy and practice in health, human rights action, humanitarian response, heritage stewardship, education and sustainable development. The Foundation serves governments, international agencies, INGOs, civil society organizations (CSOs), commercial entities, consortia and alliances.

Support for this service is provided by the <u>Bill & Melinda Gates Foundation</u>; the <u>Bill & Melinda Gates Medical Research Institute</u>, and industry resource members Janssen/J&J, Pfizer, Sanofi US, and Takeda, (list in formation).

Support is also provided by a growing list of individuals who use this membership service to support their roles in public health, clinical practice, government, NGOs and other international institutions, academia and research organizations, and industry.
